

Solid State Broadband High Power Amplifier

2214

 2900 – 3500 MHz / 8kW_{PK} Pulsed

This SKU 2214 is comprised of multi-drawer integrated subsystems to produce a minimum output of 8kW peak pulsed power. The amplifier subsystem features multiple high power GaN devices that provide wide frequency response, high gain, high peak power capability, and low distortions. Exceptional performance, long-term reliability and high efficiency are achieved by employing advanced broadband RF matching networks and combining techniques, EMI/RFI filters, and all qualified components. Each drawer is constructed within single drawer including the integral forced air-cooling fans. The system comes standard to operate from 180-260VAC a three phase AC source.

The amplifier system includes a built-in control and monitoring system, with protection functions which preserve maximum output capability and reliability. Remote management and diagnostics are via an embedded web server allowing network managed site status and control simply by connecting the unit's Ethernet port to a LAN. Using a web browser and the unit's IP address (IPV4) allows ease of access with the benefit of multilevel security. The control system core supports hardware encryption, runs an embedded OS (Linux), has a built-in non-volatile memory for event recording, and factory setup recovery features. The extended memory option allows storage of control parameters and event logs.

We are delivering more than just RF power, the next generation family of systems provide dynamic adjustments linked to the processing power and digital controls, which focus on maximizing system availability time as well as power output under ALL conditions.

Empower RF's ISO9001:2008 Quality Assurance Program assures consistent performance and the highest reliability.

- Solid-state class AB design
- Suitable for instantaneous pulse operation over the operating band.
- Compact Modular design and scalable architecture
- 50 ohm input/output impedance
- Built-in Control, Monitoring and Protection functions
- High reliability and ruggedness

COMMUNICATION INTERFACES:

Function	Utility	Connector
Ethernet	Network management of device / web interface	RJ45
USB	Mass storage / Expansion Bus	USB 1.x/2.0 compatible
RS-232 (default) RS-422 (optional)	Serial management of device / local operator access	D-SUB 9 position male

SYSTEM I/O CONNECTOR – 14 pin

Pin #	Description	Specification
1	FWD (TP)	Forward detected power (analog voltage: 0 – 5 Volt)
2	REV (TP)	Reverse detected power (analog voltage: 0 – 5 Volt)
3	Summary Fault	Summary fault: TTL “High” (Logic 1) = fault
4	N/C	No Connection
5	Shutdown	Amplifier Enable: TTL “High” (Logic 1) or Open Amplifier Disable: TTL “Low” (Logic 0)
6	AuxPS (TP)	+44 V _{DC} ±4.0V (resettable 0.5amp fuse)
7	VDD (TP)	+44 V _{DC} ±4.0V (resettable 0.5amp fuse)
8	GND	Ground
9&10	Open drain control	Site management utility (reserved)
12&13	Digital I/O (configurable)	Site management utility (reserved)
14	GND	Ground

Available Options
2214-001
-001 180-260 VAC, 3-phase-Delta, 47-63 Hz, Rear RF Connectors

-002 TBD

-003 TBD

-004 TBD
