Empower RF Systems and Advanced Test Equipment Rentals Announce New Rental Partnership

Los Angeles, April 13 2015 – Empower RF Systems and Advanced Test Equipment Rentals (ATEC) today announced an agreement to become a preferred rental distributor of Empower RF's high power amplifiers for EMC compliance and product testing applications, bringing greater product availability to customers with immediate test equipment needs. ATEC will now carry the Empower Next Generation Platform of RF amplifiers, including the 1 to 3.1 GHz, 1 kW HPA, model 2170, which is ideal for Automotive and DO-160 pulsed and CW immunity requirements.

Empower RF Systems provides best in class RF and Microwave amplifiers and modules from 10Khz to 6Ghz with 10 watts to 10 Kilowatts output power- ideal for wireless infrastructure testing and radiated immunity compliance testing with field strengths that go beyond 200V/m CW and 2000V/m pulsed, and well aligned for demanding automotive, military, communications, and aerospace requirements. ATEC is one of the largest rental companies of test equipment for telecommunications, aerospace, semiconductor, consumer electronics and many other sectors.

"Partnering with Advanced Test Equipment Rentals provides scale and a broader reach for our company as we accelerate the roll out of our high performance, next generation amplifiers," said Jon Jacocks, CEO of Empower RF. "ATEC's long tenured relationships and ongoing investments in delivering timely service and solutions to the test and measurement market are a great fit with our growth and product introduction plans".

"We are excited to be working with Empower RF Systems as a key partner," said Jim Berg, CEO of ATEC. "This partnership builds on our commitment to offer our customers the best technology products and leading edge solutions for their test requirements. The next generation amplifiers being introduced by Empower are ideal additions to our extensive inventory of equipment."

About Empower RF Systems

Empower RF Systems, Inc is a technology innovator of RF and Microwave amplifiers. Headquartered in Los Angeles, Empower designs and manufactures 10 KHz to 6 GHz solid state power amplifiers with output power ranging from 10 Watts to multiple kWatts and offers standard EIA rack mount systems, modules, and custom solutions. Empower offers the latest in Class A and AB amplifiers that provide infinite load VSWR electronic protection with low distortion signals. This broad range of capable amplifiers is ideal for EMC/EMI, industrial, scientific, and medical applications. Empowers ability to customize options, transmit clean signals with low harmonics and cater to the application of the end-user, provides the flexibility needed for your product testing requirements.
