

FOR IMMEDIATE RELEASE

S Band Transmitter for Radar and Jamming

Empower RF Systems Model 2213 is a Compact Solid State GaN On SiC Amplifier Delivering 10KW of Peak Pulsed Power.

This air cooled 10 KW 6% duty cycle pulse amplifier system brings sophisticated monitoring, protection, and control functions to mission critical applications. It's an intelligent amplifier system with a flexible software and embedded firmware design that can be customized to add mission support capabilities specific to the users integrated system. Remote control and monitoring is included.

The 2213 is based on Empower's established and field proven Next Generation architecture that is tactically deployed and operating on multiple levels in support of a variety of critical DOD missions.

The 2213 comes complete with internal directional coupler, external forward and reverse sample ports, and an easy to use web GUI. In depth health monitoring with alarms visible on the front panel are also pushed out via the LAN port. For critical "on air" applications, the 2213 provides "Graceful Output Power Degradation", backing down power to a safe operating level in the event of component failure or excessive Load VSWR condition.

Product Highlights

- Higher Availability
- Higher Efficiency
- Best in Class SWaP
- Waveform Flexibility
- Rugged for Mobile Deployment
- Remote Monitoring and Control
- Active RF Device Redundancy- Graceful Output Power Degradation

Complete Empower RF Amplifiers lineup:

http://www.empowerrf.com/products/rf_power_amplifier.php

Empower RF Systems is the technology leader in high power amplifier solutions for reliable communications, defense, and industrial applications. Our products incorporate the latest semiconductor and power combining technologies and originate from an extensive library of “building block” designs. Solutions range from basic modules to multifunction PA assemblies with embedded real time microprocessor control.
